Foreman - Bug #14843

foreman-rake config should print errors when providing an invalid value

Description

Currently, foreman-rake config might take values for any setting, but when we check if it's valid or not, we just don't print the error when it's not valid.

Revision 5b53236f - 04/29/2016 11:26 AM - Daniel Lobato Garcia

Fixes #14843 - Improve rake config error handling

Currently rake config doesn't give you any hint when you provide an
invalid setting. Instead, it should tell you what was wrong with the
input, and try to guide you to a valid one.

This commit provides error handling for wrong JSON values, and prints
what the error was if the setting could not be saved.
