Pull request:	https://github.com/theforeman/community-templates/pull/271	

Description

Instead of hardcoding `/dev/sda`, use the first disk that the debian installer detects through the ``list-devices disk`` command. This can still select the wrong device for the particular setup, but at least does not install into SD card devices any more (an issue we had a couple times on some machines).

Revision 7e22b2d1 - 04/28/2016 12:48 PM - Philipp Wagner

Fixes #14845: Use the first partition in preseed (#271)

Instead of hardcoding `/dev/sda`, use the first disk that the debian installer detects through the ``list-devices disk`` command. This can still select the wrong device for the particular setup, but at least does not install into SD card devices any more (we had that happening a couple of times).

Hi Phillip - same comment as the other, please just send template fixes to <https://github.com/theforeman/community-templates> rather than against Foreman itself.

#2 - 04/27/2016 03:43 AM - The Foreman Bot

- Status changed from New to Ready For Testing
- Pull request <https://github.com/theforeman/community-templates/pull/271> added

#3 - 04/27/2016 03:44 AM - Philipp Wagner

No problem, did that. Do those PRs also require a ticket to be opened?

#4 - 04/27/2016 03:46 AM - Dominic Cleal

Thanks! No ticket's required, but no harm in leaving this open now and we'll track and close it as usual.

#5 - 04/28/2016 01:01 PM - Philipp Wagner
