<b>Description</b>	
Hi,	
I may be missing something but currently usergroups cannot be used in any particular way other than adding users to the usergroups.	
For individual users the following can be done:	
<ul style="list-style-type: none"><li>• Assign a role to a user , e.g steve can have 'site manager'</li><li>• Assign a filter to a user e.g user steve only acts on hosts in hostgroup '/base/castor'</li><li>• A host can be owned by a user.</li></ul>	
I believe all for all of the above being able to do them for a usergroup would be very useful.	

#### History

So indeed I did miss that a host can be owned by a usergroup. This can be done, the groups are just at the bottom of the list of the users.

This was the main one I was missing of the three. I don't quite now know why I want the other two.

Please close this , apologies for the bother.
