

## Smart Proxy - Bug #15022

### "Running scan\_directory" operation do not check environments manifests folder

05/12/2016 08:44 AM - Andre Davis

<b>Status:</b> Resolved

<b>Description</b>	
I'm using: Ubuntu 14.04.4 and Foreman installed using default options and readme from Foreman website.	
Steps:	
1. Create additional folder for some environment and manifests folder inside.	
2. Create some sample class inside site.pp, which can be validated by puppet parser. For example:	
<pre>class some {   file { '/tmp/generated-file':     ensure =&gt; present,     mode   =&gt; '0644',     content =&gt; "test: \$(ipaddress_eth0)",   } }</pre>	
3. Enable Smart Proxy debug logs and run environment scan.	
Result:	
Filter logs using Search field, use for example "development/manifests" string - you will see that folder wasn't scanned. As result - environment wasn't imported.	
My Smart Proxy version - 1.11.1	

#### History

- Category set to Puppet

- Priority changed from High to Normal

[#13667](#) with Puppet Server 2 (Puppet 4) will support this automatically.

It's recommended that you place all classes into a module layout, which is what the smart proxy currently supports. ([https://docs.puppetlabs.com/puppet/3/reference/modules\\_fundamentals.html#module-layout](https://docs.puppetlabs.com/puppet/3/reference/modules_fundamentals.html#module-layout) etc)
