

Foreman - Bug #15163

Use new oVirt CA cert endpoint

05/24/2016 10:02 AM - Lukas Zapletal

Status: Closed	
Priority: Normal	
Assignee: Lukas Zapletal	
Category: Compute resources - oVirt	
Target version: 1.12.0	
Difficulty:	Fixed in Releases:
Triaged:	Found in Releases:
Bugzilla link: 1370169	Red Hat JIRA:
Pull request: https://github.com/foreman/foreman/pull/3548	
Description	
Until now, we are downloading /ca.crt file from RHEV/oVirt. From version 3.4+ new endpoint is available (/ovirt-engine/services/pki-resource?resource=ca-certificate&format=X509-PEM-CA HTTP GET) and the old one will be deprecated.

Please take into account that both the old and new endpoints return the certificate of the CA that was created when the RHV/oVirt engine was installed. But the RHV/oVirt administrator may later replace the certificates, specially the web server certificate, see [1]. If that happens the CA certificate obtained from those endpoints won't work to connect to the engine. I'd suggest that you take the certificate directly from the SSL handshake, that will always work.
