

Installer - Bug #15164

Need a method of specifying associated org when registering a smart proxy

05/24/2016 10:09 AM - Stephen Benjamin

Status: New	
Priority: Normal	
Assignee: Stephen Benjamin	
Category: Foreman modules	
Target version:	
Difficulty:	Fixed in Releases:
Triaged:	Found in Releases:
Bugzilla link: 1326465	Red Hat JIRA:
Pull request:	
Description	
Cloned from https://bugzilla.redhat.com/show_bug.cgi?id=1326465	
Description of problem:	
When I install a capsule, I should have a way to specify what org this capsule should be associated with upon install. Currently it is a manual step and it is not at all intuitive since it remains pigeonholed away in the no org context, after installation.	
Version-Release number of selected component (if applicable):	
SNAP 7.1	
How reproducible: every time	
Steps to Reproduce:	
1. Follow all the normal steps to install a capsule:	
<ul style="list-style-type: none">• Register host to satellite; register to org "Default Organization"• generate capsule cert on satellite• install capsule rpms on target host• follow steps listed upon generating capsule cert to install capsule on target host.	
2. In Satellite UI, set/assume context to be Default Organization	
3. navigate to Infrastructure > Capsules	
4. Look for your capsule	
5. set context to "Any Context"	
6. REPEAT STEPS 3-4.	
Actual results:	
After successful creation of capsule, it is not intuitive as to where that capsule is, and at a minimum, a second step is required to set the org after installing capsule.	
Expected results:	
There should be a way to determine associated org at install time, just like when registering the box.	
I am unsure whether assuming we want to use the registered org as a default is a correct assumption, but it's an example. We shouldn't have to install the capsule and subsequently then go and assign an org.	
When a capsule is not associated with any org, it sort of falls into a "black hole" and is not immediately seen. So user actually has to do multiple steps to assign the org:	
1. install capsule	
2. change context to find newly installed capsule	
3. associate capsule with org.	

Additional info:

Some might argue this is an RFE. I would argue that it's a critical shortcoming in how we're installing a capsule.
