Pull request:	
Description Currently foreman only returns a array of hostnames as the default index action for json output. I would like to add more host attributes so I don't have to make more calls to foreman in future requests. This will break versions of remoteadmin prior to upcoming 0.6 version and may cause issues with foreman CLI but I think its a better solution in the long run. I am adding the following attributes: id, hostgroup_id, puppet_status. It will be easy to add more attributes later.	
Related issues: Is duplicate of Foreman - Bug #875: Non consistent behaviour of GET APIs Duplicate 05/03/2011
