Description

Cloned from https://bugzilla.redhat.com/show_bug.cgi?id=1343391
Description of problem:
Build: satellite 6.2 snap 14.1

Version-Release number of selected component (if applicable):

How reproducible:
Try to add compute resource of type RHEV using required parameters

Actual results:
Unable to save
ERF56-1309 [Foreman::FingerprintException]: The remote system presented a public key signed by an unidentified certificate authority. If you are sure the remote system is authentic, go to the compute resource edit page, press the 'Test Connection' or 'Load Datacenters' button and submit

Expected results:
Compute resource should be added successfully

- Category changed from Compute resources to Compute resources - oVirt

- Status changed from New to Assigned

- Priority changed from High to Normal

The problem is only when the CA cert is not installed. A workaround is to configure it manually.
