Description

Cloned from https://bugzilla.redhat.com/show_bug.cgi?id=1344689

Description of problem:

I was trying host provisioning and it failed at the step where anaconda fetches the kickstart file to install

Version-Release number of selected component (if applicable):

upgrade sat6.1.9 -> sat6.2 Ga snap15.1 on rhel7

How reproducible:

Steps to Reproduce:

1. upgrade satellite 6.1.9 -> 6.2
2. re-run the installer to enable dns, dhcp features

3. create new host

Actual results:

host provisioning failed

Expected results:

provisioning should work

fixes #15416 - update untouched templates during seed

During upgrades, we run db:seeds again, but provisioning templates are never updated again after the first time. This causes issues like when those templates cease working with the newer versions of Foreman. So, this PR updates the contents of the templates if a user has never modified them.
