### Description

Cloned from https://bugzilla.redhat.com/show_bug.cgi?id=1322875
Description of problem:

Satellite 6 allows provisioning using IPMI / PXE. Our customer currently relies on the native ILO protocol (https based) to boot an ISO image, IPMI is blocked in the network based on security concerns. ILO by itself allows XML based requests over https, HP offers "HP ILO Scripting Tools":

http://www8.hp.com/us/en/products/server-software/product-detail.html?oid=5219389

Version-Release number of selected component (if applicable):

Satellite 6.1.x

How reproducible:

Always

Steps to Reproduce:
1. Power control HP server with IPMI off
2.
3.

Actual results:

No functionality

Expected results:

Working power control

Additional info:

---

### History

**#1 - 06/17/2016 02:56 AM - Dominic Cleal**

*- Project changed from Foreman to Smart Proxy*

*- Subject changed from HP ILO support in Satellite 6 to HP ILO BMC support*

*- Category set to BMC*

*- Assignee deleted (Lukas Zapletal)*

*- Priority changed from Low to Normal*
