

Foreman - Bug #15491

Deleting a powered on virtual machine hosted on oVirt doesn't work

Description	
Hello,	
Since oVirt 3.6.X released, foreman can't delete the VM while it's powered on, to replicate:	
<ul style="list-style-type: none">- Have a machine running on oVirt " that has been provisioned by foreman"- Go to the host details page- Click delete- The machine will be powered off but not deleted " [app] [W] Failed to destroy a compute Cetus (oVirt) instance XXXXXXXXXX: Cannot remove VM. VM is running. "- Check the VM, still exists but foreman managed to turn it off.- Delete the machine again " while it is powered off " everything works fine and the machine gets deleted	
my guess that oVirt might be taking a bit of a longer time to shutdown the VM and foreman doesn't wait long enough ?	
Regards, Sherif
