

Smart Proxy - Feature #1552

Puppet proxy should support \$confdir in modulepath when looking for environments/classes

03/26/2012 04:34 PM - Jason Antman

Description	
<p>This is related to issue:1387. For those of use who followed the PuppetLabs blog (http://puppetlabs.com/blog/git-workflow-and-puppet-environments/) literally:</p>	
<pre>[main] server = puppet.example.com environment = production confdir = /etc/puppet [master] environment = production manifest = \$confdir/environments/\$environment/manifests/site.pp modulepath = \$confdir/environments/\$environment/modules [agent] report = true show_diff = true environment = production</pre>	
<p>The smart-proxy puppet component is returning an empty list of environments. As far as I can tell, the solution here can be as simple as looking at the modulepath value (in the dynamic environments block in lib/proxy/puppet/environment.rb) and, if that value contains "\$confdir" and conf[:main][:confdir] is not nil, making the replacement.</p>	
<p>I'm going to try and submit a patch for this later this week, but be warned, I'll be flipping through Learning Ruby as I do it.</p>
