

Foreman - Bug #15551

suggest new does not suggest a different ip on host interface edit form

06/30/2016 09:12 AM - Timo Goebel

Status: New	
Priority: Normal

Pull request:	
Description	
Create a new Host in Foreman and open the interface modal. Select a subnet with ipam enabled.	
When an IP address has been auto suggested, i.e. the ip address field is filled, and a user clicks the "Suggest new" link the expected behaviour is that a different ip is suggested. However the IP does not change.	
The reason is that the ip which is shown in the ip field is not correctly passed to Foreman via js:	
Parameters: {"subnet_id"=>"1", "host_mac"=>"", "organization_id"=>"", "taken_ips"=>["", ""]}	
taken_ips should be ["", "1.1.1.1"]
