Description

Hello Foreman Users,

I recently upgraded to Foreman 1.12 but I should note that it was happening before 1.12 upgrade and I upgraded thinking that it would fix the Ubuntu Mirror errors I am getting.

The Preseed Default Template previews correctly in Foreman and it looks like this in the Mirror Settings:

1. Locale
 - d-i debian-installer/locale string en_US
 2. country and keyboard settings are automatic. Keep them ...
 3. ... for wheezy and newer:
 - d-i keyboard-configuration/xkb-keymap seen true
 4. ... for squeeze and older:
 - d-i console-keymaps-at/keymap seen true
-
1. Network configuration
 - d-i netcfg/choose_interface select auto
 - d-i netcfg/get_hostname string elk.domain.com
 - d-i netcfg/get_domain string domain.com
 - d-i netcfg/wireless_wep string

```
d-i hw-detect/load_firmware boolean true
```

1. Mirror settings

```
d-i mirror/country string manual
d-i mirror/http/hostname string archive.ubuntu.com:80
d-i mirror/http/directory string /ubuntu
d-i mirror/http/proxy string
d-i mirror/codename string trusty
d-i mirror/suite string trusty
d-i mirror/udeb/suite string trusty
```

I've tried using both USA and Canada for Language/Country and it keeps error'ing out. Works ok with CentOS but Ubuntu for some reason doesn't. I can confirm that <http://archive.ubuntu.com/ubuntu> is pingable from the Foreman server and I can browse to it. Am I missing something in there? PLEASE HELP!

This is my Installation Media configuration:

Name *

Path *

The path to the medium, can be a URL or a valid NFS server (exclusive of the architecture), for example `http://mirror.centos.org/centos/$version/os/$arch` where `$arch` will be substituted for the host's actual OS architecture and `$version`, `$major` and `$minor` will be substituted for the version of the operating system. Solaris and Debian media may also use `$release`.

Operating system family

History

#1 - 07/15/2016 03:01 AM - Dominic Cleal

- Tracker changed from Bug to Support
- Category set to Unattended installations

Also at <https://groups.google.com/forum/#!topic/foreman-users/uPjWPgVAF1Y>.

My only guess would be to check the other virtual consoles (ctrl+alt+f*) and see if there are any logs or more details available. Also try Ubuntu support channels for help.

#2 - 07/15/2016 12:08 PM - Anthony De La Rosa

Hey Dominic! Thanks for getting back to me as always. Yeah I opened that topic in Google Foreman Groups but no luck yet
