Pull request: https://github.com/foreman/foreman/pull/3660	
Description	
<p>The test bundler group currently contains spork, which is a pretty inactive project that also does not support Rails 5, so I'd like to replace it.</p> <p>Rails 4.1 introduced spring by default in new applications to preload Rails for both test and development environments, so it works to replace use of spork for tests (bin/rake test test/unit/domain_test.rb) and also speeds up console/runner usage etc. https://github.com/rails/spring#readme has more usage info.</p>

Revision 4b836b62 - 07/21/2016 03:51 AM - Dominic Cleal

fixes #15751 - replace spork with spring in development

To make use of it, run bin/rails and bin/rake rather than plain rails or rake commands, and run `spring status` or `spring stop` to check and stop current background processes.

Test log removal has moved to the logging framework as the file would not be recreated after being deleted in the test helper, since the Rails environment and logger are not reloaded on each `rake test`.
