Description

Currently foreman manages DNS records (A/PTR) for hosts that are created via the Foreman UI. It would be nice to have a DNS management UI in foreman for adding CNAME/A/PTR/TXT/MX records for hosts. To summarise full DNS management.

- Description updated

https://bugzilla.redhat.com/show_bug.cgi?id=1045613 also requests SRV support (with weights etc), CNAME support not limited to a single host (e.g. round robin, wildcards) and to point to hosts not registered in Foreman.
