

Foreman - Bug #1582

Privacy leak in dashboard, statistics, facts and classes.

04/20/2012 10:57 AM - Brian Gupta

Status: Closed	
Priority: Normal	
Assignee: Greg Sutcliffe	
Category: Users, Roles and Permissions	
Target version: 1.0	
Difficulty:	Fixed in Releases:
Triaged:	Found in Releases:
Bugzilla link:	Red Hat JIRA:
Pull request:	
Description	
Note that if using roles and user based domain filters, the dashboard still shows stats for hosts that the user isn't supposed to know about.	
The same issue is present for stats, facts and classes.

Ok, I've had a bash at it, and I think I've fixed all but the Classes. You can find the patch at <https://github.com/GregSutcliffe/foreman/tree/1582> and if you have time to test, I'd be grateful.

As for the Classes, I'm thinking that we might be able to build a db query about what classes are available to every host the user can edit. Could be tricky, but I'll see if I can take a look over the weekend.

Ok, pull request in (<https://github.com/theforeman/foreman/pull/53>). It seems classes are already filtered by the environment the host is in, so I guess we need to:

- Provide a way for an Admin to restrict what environments a user can select when editing a host.
- Ensure that if the user can see the Puppet Classes page, that it only shows classes available to the environments configured in (a)

@bgupta, if you agree, I'll create a feature request for that and we can close this when 53 is merged....
