

Smart Proxy - Bug #1587

Puppet's modulepath not interpreted correctly by proxy

04/25/2012 10:34 AM - Josh Baird

<b>Pull request:</b>		
<b>Description</b> Running foreman-proxy-0.3.3-0.1.noarch, installed on the PM.  My puppet.conf defines environments like:  [prod] modulepath = /etc/puppetlabs/puppet/env/prod/modules:/etc/puppetlabs/puppet/env/common/modules:/opt/puppet/share/puppet/modules manifest = /etc/puppetlabs/puppet/manifests/site.pp pluginsync = true  When I query the proxy for classes in the "prod" environment, I see:  [root@fc-wrpupem01 manifests]# wget -q -O - <a href="http://localhost:8443/puppet/environments/prod">http://localhost:8443/puppet/environments/prod</a> { "paths": "/etc/puppetlabs/puppet/env/prod/modules/etc/puppetlabs/puppet/env/common/modules/opt/puppet/share/puppet/modules", name: "prod" } [root@fc-wrpupem01 manifests]#  It would appear that proxy is ignoring the delimiters (":") and concatenating the entire string.
