Description

I'm having trouble w/ dhcp.

I'm getting the following behavior

when I tried to provision a new host, even though I setup a dhcp range. Foreman would ping for a free ip address in that subnet.

When I tried to add the host, I'm getting the following message.

Unable to save
DHCP Settings for test00055m task failed with the following error: Failed to add DHCP reservation for test00055 (10.10.10.5 / 11:33:33:11:34:55): No response from DHCP server

Could you advised. I believe I am running Foreman (Version 0.4.2), checking the footer of the page.

Thanks,
Thomas

Hi,

I am able to connect to my dhcp server and be given an IP. It seems like the foreman-proxy isn't seeing the range of IP Address that I ask it to set. This is what I'm seeing in the log file. It's ignoring my dhcp range and doing a ping test.. is this the behavior?

- Status changed from New to Feedback

afair, range support into the proxy was introduced in the non stable repo, consider upgrading it from yum.theforeman.org/test and see if that works

Hello,

Did you update Foreman? Does it work for you now?

Regards
