

Foreman - Bug #1613

Email address format validation preventing admin user creation

05/10/2012 05:18 PM - Andy Shinn

Status: Closed	
Priority: Normal	
Assignee: Ohad Levy	
Category: DB migrations	
Target version: 1.0	
Difficulty: easy	Fixed in Releases:
Triaged:	Found in Releases:
Bugzilla link:	Red Hat JIRA:
Pull request:	
Description	
<p>On both RPM versions 0.4.2-0.1 and 0.5.1-1 the admin user is being created with the Auth type not set. On 0.4.2, without the :login setting, I can browse to the dashboard which logs me in as admin. If I then enable :login and refresh the dashboard I am automatically logged in and can see that the admin user has no Auth type set.</p> <p>When I try to reset the admin user I receive the following Mail is invalid error</p> <pre>[root@foreman1 foreman]# rake -t -v permissions:reset RAILS_ENV=production Libvirt binding are missing - hypervisor management is disabled /usr/lib/ruby/gems/1.8/gems/ruby_parser-2.3.1/lib/ruby_parser_extras.rb:10: warning: already initialized constant ENC_NONE /usr/lib/ruby/gems/1.8/gems/ruby_parser-2.3.1/lib/ruby_parser_extras.rb:11: warning: already initialized constant ENC_EUC /usr/lib/ruby/gems/1.8/gems/ruby_parser-2.3.1/lib/ruby_parser_extras.rb:12: warning: already initialized constant ENC_SJIS /usr/lib/ruby/gems/1.8/gems/ruby_parser-2.3.1/lib/ruby_parser_extras.rb:13: warning: already initialized constant ENC_UTF8 ** Invoke permissions:reset (first_time) ** Invoke environment (first_time) ** Execute environment ** Execute permissions:reset Mail is invalid</pre> <p>I am able to bypass the error by commenting out the validation in the user model:</p> <pre># validates_format_of :mail, :with => /^([\^@\\s]+)((?:[-a-z0-9]+\.)+[a-z]{2,})\$/i, :allow_nil => true</pre> <p>This happens both with a domain of localdomain or localdomain.mydomain.com. The latter appears to pass with email address root@localdomain.mydomain.com. I am not sure what may be failing.</p> <p>This is on CentOS 6 x86_64 using foreman-installer.</p>

- Target version deleted (1.0)

Hi Andy,

I've tried to reproduce, but none of my test email addresses were failing, can you mention which email address did it try to create it under?

thanks

#3 - 06/21/2012 09:47 PM - Andy Shinn

I was trying with a local domain I had setup. The local domain is called, literally, 'localdomain'. So my root email is root@localhost.localdomain. I'm in the process of setting up a new environment to test Foreman in so if this is reproducible it can be closed and I can reopen if it happens on the latest version.
