Pull request: https://github.com/foreman/foreman/pull/3751	
Description bundle.js requires newly added js modules and makes them available through Webpack. Unfortunately, on-complete callback (https://github.com/foreman/foreman/blob/develop/app/assets/javascripts/application.js#L103) does not support modules because <code>window['a.b.c'] !== window['a']['b']['c']</code> . Backward compatible support for module namespaces should be introduced for this callback.
