<b>Description</b>	
<p>After running "yum -y update" on our katello capsule (version 1.11.4 reported in the GUI) these updates were applied</p> <p>Aug 18 19:22:41 Updated: python-pulp-common-2.8.6-1.el7.noarch Aug 18 19:22:41 Updated: python-nectar-1.5.2-1.el7.noarch Aug 18 19:22:41 Updated: python-pulp-repoauth-2.8.6-1.el7.noarch Aug 18 19:22:41 Updated: python-pulp-rpm-common-2.8.6-1.el7.noarch Aug 18 19:22:42 Updated: python-pulp-oid_validation-2.8.6-1.el7.noarch Aug 18 19:22:42 Updated: python-pulp-puppet-common-2.8.6-1.el7.noarch Aug 18 19:22:42 Updated: python-pulp-docker-common-2.0.2-1.el7.noarch Aug 18 19:22:42 Updated: python-pulp-agent-lib-2.8.6-1.el7.noarch Aug 18 19:23:51 Updated: pulp-selinux-2.8.6-1.el7.noarch Aug 18 19:23:51 Updated: python-django-bash-completion-1.8.14-1.el7.noarch Aug 18 19:23:59 Updated: python-django-1.8.14-1.el7.noarch Aug 18 19:24:05 Updated: pulp-server-2.8.6-1.el7.noarch Aug 18 19:24:05 Updated: python-pulp-streamer-2.8.6-1.el7.noarch Aug 18 19:24:05 Updated: pulp-puppet-plugins-2.8.6-1.el7.noarch Aug 18 19:24:06 Updated: pulp-docker-plugins-2.0.2-1.el7.noarch Aug 18 19:24:06 Updated: pulp-rpm-plugins-2.8.6-1.el7.noarch Aug 18 19:24:06 Updated: pulp-rpm-handlers-2.8.6-1.el7.noarch Aug 18 19:24:08 Updated: 1:v8-3.14.5.10-25.el7.x86_64 Aug 18 19:24:11 Updated: python-crane-2.0.1-1.el7.noarch Aug 18 19:24:11 Updated: 1:mariadb-libs-5.5.50-1.el7_2.x86_64</p> <p>One of these broke httpd on the capsule. Message from the failed service:</p> <p>AH00526: Syntax error on line 28 of /etc/httpd/conf.d/pulp.conf: Name duplicates previous WSGI daemon definition.</p> <p>Line 28 in pulp.conf is</p> <pre>WSGIDaemonProcess pulp user=apache group=apache processes=3 display-name=%{GROUP}</pre> <p>This line is duplicated in 05-pulp-https.conf</p> <pre>[root@wellcapsuleext conf.d]# cat 05-pulp-https.conf   grep WSGIDaemonProcess WSGIDaemonProcess pulp user=apache group=apache processes=3 display-name=%{GROUP}</pre> <p>According to <a href="https://access.redhat.com/solutions/2535061">https://access.redhat.com/solutions/2535061</a> removing the 05-pulp-https.conf is the answer - doing that does allow httpd to start, but then in the katello GUI browsing to the capsule gives an SSL error for the content sync status. Swapping the two files so that 05-pulp-https.conf was in /etc/httpd/conf.d instead of pulp.conf still allows httpd to start, and gives no error in the katello GUI</p> <p>I have attached both 05-pulp-https.conf and pulp.conf</p>	
<b>History</b>	

**#1 - 08/30/2016 02:18 PM - Justin Sherrill**

- translation missing: en.field\_release changed from 143 to 184

**#2 - 09/27/2016 02:27 PM - Justin Sherrill**

- Status changed from New to Rejected

- Assignee set to Justin Sherrill

- translation missing: en.field\_release changed from 184 to 166

I believe 'foreman-installer' just needed to be run after upgrading. This is common after doing a 'yum update' as different updates can drop files in /etc/httpd/conf.d/ which conflict with what puppet is managing.

Going ahead and closing, feel free to comment if you feel different.
