Pull request:			

Description

Currently bundler (Gemfile) has a single group called virt that contains the dependencies for VMWare, Ovirt, libvirt and Fog/EC2). I want to just install Fog, and don't imagine that everyone needs all three, so being able to select what gets installed would be useful.

I plan to break it down into three groups:

:fog
:vmware
:virt

Associated revisions

Revision 6db04662 - 05/15/2012 02:25 PM - Brian Gupta

Updated bundler groups in Gemfile to separate vmware, fog and libvirt/ovirt. Fixes #1622
