Description
Since this is largely customized per site after install, it should not be tracked in Git after the initial checkout.

Revision 7c7ddfe0 - 05/19/2012 01:47 PM - Brian Gupta

fixes #1624 - Moved database.yml to database.yml.example

keeping the database configuration file within the repo is not needed,
therefore, we moved it to an example config file, and added the
database.yml to a to .gitignore

NOTE: this would break you installation, as you would need to:

cp config/database.yml.example config/database.yml

History

#1 - 05/19/2012 01:16 PM - D. Johnson

I would rather see a sample file in the git repo that can update along with whatever is needed or becomes default in future versions than to track actual user-config file in git.

Setup is trivial, ex: "cp database.yml.sample database.yml" and edit to fit (which they would have to do regardless).

#2 - 05/19/2012 01:56 PM - Brian Gupta

- Status changed from New to Closed

- % Done changed from 0 to 100
