Pull request:	
Description	
Please add support for the spice client (spice-xpi for firefox).	
This will improve security as it will be secured from client to h-node.	
It also makes life easier for anyone not using Windows. The new RHEV webadmin interface only supports getting console access via the spice client, whereas Foreman limits you to VNC. This means you can either get console for your client from RHEV or Foreman, but not both.
