Bugzilla link:	1341962	**Red Hat JIRA:**	
Pull request:	https://github.com/theforeman/foreman/pull/3798		

Description

The notification names are generated by using humanized versions of the name which is stored in the database. These are not localized.

Associated revisions

Revision d5415cbb - 09/01/2016 02:07 AM - Bryan Kearney

Fixes #16384 - Localize the names for email prefs

Two changes were made to support this:

1) The seed file which loads the notifications to the db was
augmented to add in the translated forms of the name.
2) The ui was enhanced to use gettext to look up the translations.

History

#1 - 08/30/2016 04:48 PM - The Foreman Bot

- Status changed from New to Ready For Testing
