Foreman - Bug #1644

Changing VNC keymap on a Libvirt VM (via virt-manager or virsh) causes web-based console to choke

05/19/2012 05:02 PM - Andreas Ntaflos

Bugzilla link:		**Red Hat JIRA:**	
Pull request:	https://github.com/theforeman/foreman/pull/4784		

Description

The web-based console of a host provisioned as a (Libvirt) VM cannot be used when the VNC keymap of the VM has been changed from "auto" to something else (by means of virt-manager or virsh). Clicking on "Console" fails with this error message:

```
Failed to set console: Call to virDomainUpdateDeviceFlags failed: internal error cannot change key
map setting on vnc graphics
```

The same message is visible in the Libvirt host's logs:

```
2012-05-19 20:59:36.339+0000: 26184: error : qemuDomainChangeGraphics:1357 : internal error cannot
 change keymap setting on vnc graphics
```

Using Ubuntu 12.04, Libvirt 0.9.8 and Foreman 0.5-nightly-ba71c565.

- Description updated

- Category set to Compute resources - libvirt

This is a bug in fog-libvirt. Opened https://github.com/fog/fog-libvirt/pull/30 to fix it. Once fix is released we will need to make sure to update the version we package.

I think this still requires https://github.com/fog/fog-libvirt/pull/43 for the array vs. string fix.
