<b>Description</b>	
<p>With the 0.5 release candidate and earlier if I grant a user 'create hostgroup' on a filter of host groups e.g on /base/castor then they can create a new host group /base/castor/whatever I think it seems sensible to me that the user filter should be extended to cover this new subgroup as well /base/castor/whatever as well. e.g having created /base/castor/whatever they might also be able to create /base/castor/whatever/andthis also but generally for other permissions for create host, delete host , .. whatever.</p> <p>Alternatively a filter of /base/castor could actually mean /base/castor and /base/castor/* either always or optionally.</p>
