Bugzilla link:		Red Hat JIRA:
Pull request:		
Description <p>we have Smart Proxy in the Foreman Core, WebUI/API/CLI and also in our Core documentation, but in the installer and package name it's foreman-proxy. This creates confusion.</p> <p>I suggest to "communicate" it from now on with new official name: "Foreman Smart Proxy" (where appropriate). Short versions stays as "Smart Proxy" or "Smart Proxies" (e.g. in the main menu).</p> <p>This will help us to "teach" our users that this is essentially the same thing.</p>		

History

#1 - 10/17/2016 08:41 AM - The Foreman Bot

- Status changed from New to Ready For Testing
- Pull request <https://github.com/theforeman/foreman/pull/3947> added

#2 - 11/03/2016 11:40 AM - Lukas Zapletal

- Subject changed from Rename Smart Proxy to Foreman Smart Proxy to Rename Smart Proxy to Foreman Proxy
- Status changed from Ready For Testing to New
- Assignee deleted (Lukas Zapletal)
- Difficulty deleted (trivial)
- Pull request deleted (<https://github.com/theforeman/foreman/pull/3947>)

Foreman Proxy seems better option, but note we also use smart-proxy term internally a lot. This could create inconsistency.
