Can you please provide your installation procedure ?

Meaning: versions of packages and order in which you're trying to install them.

I've encountered same issue when installing foreman 0.42 or 1.0rc1 on Debian 6.0.

As a workaround packages needs to be installed in following order:

1. apt-get install puppet puppetmaster git-core
2. apt-get install foreman-mysql
3. apt-get install -t squeeze-backports puppet puppetmaster

Hi Deniss,

I simply followed your instruktions "Debian-Ubuntu installation by packages" on http://theforeman.org/projects/foreman/wiki/Debian-Ubuntu_installation_by_packages .

I've tried to install it on Ubuntu 12.04 LTS and then appeared the dependencies errors.

Trying out your workaround above ends with dependency errors again at the end of foreman-mysql installation:

Errors were encountered while processing:

foreman

foreman-mysql

I've taken the stable packages repository (deb <http://deb.theforeman.org/> stable main)

Try installing from testing.

Today I've re-installed newer puppet + puppetmaster (2.7+) and then foreman-mysql and dependency error is gone.

Yea, now the installation works well, thank you!
