

Foreman - Bug #1713

Trying to clone a host that is a VM (based on Libvirt compute resource) fails

Description	
<p>Creating and provisioning a new host that is a Libvirt VM works fine. Trying to clone that host fails with a vast trace, too big to paste here, so please find it here: https://gist.github.com/e824042806b311673ef1</p> <p>The error also appears in libvirt's logs:</p> <pre>2012-06-27 11:12:48.701+0000: 14618: error : virStorageSize:988 : XML error: unknown size units '0'</pre>	
<p>This may or may not be related to the fact that our VMs are all based on a LVM storage pool and use LVs as storage volumes. We currently have the "workaround" from issue #1639 applied.</p>
