Pull request: https://github.com/foreman/foreman-xen/pull/47	
Description	
Hello,	
I have problem with creates a new host deployed on xenserver. When I look to Virtual Machine bookmark I see error (doesn't matter which Compute profile is choose):	
<pre>Failure: undefined method `memory_options' for #<#:0x00000003eca920></pre>	
Same issue is in the Compute profiles if I click to any xenserver.	
Foreman log: 2016-11-03 11:14:09 fc30251d [app] [W] Action failed NoMethodError: undefined method `memory_options' for #<#<Class:0x0000000788ef58>:0x007fe52fa974c0> /opt/foreman/tfm/root/usr/share/gems/gems/foreman_xen-0.4.0/app/views/compute_resources_vms/form/xenserver/_base.html.erb:29:in `__opt_foreman_tfm_root_usr_share_gems_gems_foreman_xen_____app_views_compute_resources_vms_form_xenserver__base_html_erb___3975886372376049017_70311260347420'	
Thanks, Zbynek

Sorry, I haven't realized this method could be used by plugins. I suppose the fix should be quite simple, you should be able apply similar patch like this <https://github.com/foreman/foreman/pull/3774/files#diff-51e61c2454ccdab23f8b20efd5a657d7> to start using new field. Let me know if you need help.

Zbyněk, could you test the patch in the pull request?

#6 - 11/04/2016 05:33 AM - Zbynek Nemas

Michael, now I am able edit Compute profiles. However I still cannot create virtual host correctly, but it's not related with this bug. I will create new task later.

Thanks

Yes, please open a new issue for the other bug. As I'm not using XenServer myself the only way to know new bugs are user reports.
