Description

Currently to know which parameters are assigned to a host I have to "Edit" the host and then go the "Parameters" tab. As a user, I would like to have a quick glance (no need to edit anything) at all the parameters a host have from the main Host view. Ideally, adding by default a new tab in the Properties/Metrics/Templates.

I know I can check those values in the "YAML dump" too, but that's too much information IMO.
