<b>Description</b>		
Hi everyone,		
when creating roles, I would like to be able to filter on the hostgroup_fullname field everywhere where a filter on hostgroup can be applied.		
This is necessary to filter on a hostgroup and all of its nested hostgroups without explicitly adding everyone of them.		
Currently this is possible on some resources like host or (via the title field, which seems to be the same) hostgroups, but not, for instance, on the factvalue resource, where only host.hostgroup is possible.		

#### History

#1 - 11/17/2016 03:07 AM - Dominic Cleal

- Category set to Search

#2 - 02/15/2023 10:37 AM - Sebastian Bublitz

- Status changed from New to Resolved

I don't know when this was added, but checking for this again it looks like it has been implemented somewhere over the past 6 years
