

Foreman - Bug #17445

Cloned vsphere host doesn't preserve 'SCSI controller' attribute.

Description	
I created a vsphere host with 'SCSI controller' type set to 'VMware Paravirtual' When cloning, the controller type isn't copied to the new host and is instead 'defaulting'? to 'LSI Logic Parallel'	
I discovered this in 1.12.4, but it has also been reproduced in 1.13.1 (thanks to timogoebel on #theforeman-dev IRC)
