Description	
<p>There are currently several ways to declare an html element should have a tooltip, such as using `rel[twipsy]`, `data-toggle=tooltip` and setting `title` attribute. This leads to tooltips sometimes not being displayed correctly or initialized more then once, as well as redundant DOM lookups to find all the possibilities.</p> <p>These should be unified to one common way that is consistent across the whole app.</p>
