Smart Proxy - Bug #1761

confdir appears to be broken again in 1.0rc3

07/17/2012 04:02 PM - David Swift

Description

[#1152](#1152) has details on possible history of this. We did an RPM-based install of puppet and foreman around July 11, and had to manually patch a puppet file to get confdir working.

I have not had time to delve deeper into it yet, sorry for the horrible bug report. If I get a chance to dig in I will.

I hate my typing skills - [#1552](#1552) is the history of this...

#2 - 07/31/2012 06:58 AM - Ohad Levy

I wonder if this related to a specific puppet version.

#3 - 08/30/2012 03:57 PM - Anonymous

From what I see a problem with the patch from [#1552](#1552) is that it requires a confdir setting to be present in puppet.conf

However $confdir defaults to /etc/puppet and thus a modulepath containing the variable should resolve even when it's not specified.

Just for reference puppet config --mode master print modulepath prints the fully resolved correct modulepath ...
