Pull request:			

Description

puppet proxy use puppet_conf variables
puppetca proxy use puppetdir and ssldir variables

It should be possible to rationalize these, for example :

SETTINGS.puppetdir || "/etc/puppet"
SETTINGS.puppetconf || puppetdir + "/puppet.conf"
SETTINGS.puppetautosign || puppetdir + "/autosign.conf"
SETTINGS.ssldir || "/var/lib/puppet/ssl"

Better is to read ssldir from puppet.conf, dunno how hard is that.

History

#1 - 05/11/2016 10:58 AM - Anonymous

- Description updated

- Status changed from New to Rejected

Don't think this is relevant any longer, all puppet-related settings are contained within puppet plugin and/or related providers configuration files.
