Description		
Hello!		
When I add "rundeckfacts" = "is_virtual" to the Global Paramaters, the Rundeck YML download breaks with the following error:		
<pre>Failed to fetch rundeck info for myserver.at.internal: undefined method `fact' for #<Host:0x7fec3ad4c1e0></pre>		
The problem seems to be on http://theforeman.org/projects/foreman/repository/revisions/develop/entry/app/models/host.rb#L574		
Unfortunately due to my lack of Rails Know-How I am not able to provide a patch for now.		
Thanks in advance!

Hi

having the same issue here.

Im not a dev, but following line
rdecktags += self.params["rundeckfacts"].split(",").map{|rdf| "#{rdf}={fact(rdf)[0].value}"}

#2 - 06/26/2013 02:42 PM - Andy Bohne

I have submitted a pull request that fixes this functionality.

<https://github.com/theforeman/foreman/pull/752>

This can be backported to 1.1. Simply make the required changes to app/models/host.rb.
