Foreman - Bug #1771

HTTP_authentication does not work for forms

07/23/2012 05:10 AM - Romain Vrignaud

Pull request:			

Description

When I use authorize_login_delegation, I'm never redirected to /users/login
but when I try to use auto_complete_search, I get a 401

See in logs :

Started GET "/hosts/auto_complete_search?search=" for 192.168.200.117 at Mon Jul 23 11:08:50 +0200 2012
Processing by HostsController#auto_complete_search as JSON
Parameters: {"search"=>""}
Completed 401 Unauthorized in 2ms

And I have a box in my browser with message :
"A username and password are being requested by http://foreman.example.com. The site says: "Application""

I could not duplicate

#5 - 11/15/2012 05:41 AM - Ohad Levy

You need to setup apache with REMOTE_USER header (authentication delegation).

#6 - 11/15/2012 11:30 AM - Romain Vrignaud

To be clear : the websso is working : I'm authenticated with
authorize_login_delegation and Foreman find my user.
However the only thing is when I clear my browser cache,
I get asked just once at the precise instant when I click on
search tab with a HTTP authentication window (not /users/login).

In the log I get a 401 Unauthorized if I don't log myself

#7 - 11/16/2012 04:04 AM - Romain Vrignaud

- Status changed from Need more information to Closed

This has been fixed in develop with the setting : authorize_login_delegation_api
