Description	
I want to see what features the smart proxy has in the json output like the following:	
<pre>[{"smart_proxy":{"url":"http://172.16.220.140:8443"},"features":[{"feature_id":5,"name":"Puppet","smart_proxy_id":1}, {"feature_id":4,"name":"Puppet CA","smart_proxy_id":1}, {"feature_id":1,"name":"TFTP","smart_proxy_id":1}], "name":"test","id":1}]</pre>	
Below is the follow code need to make this happen:	
<pre>format.json {render :json => SmartProxy.all.to_json(:except => [:created_at, :updated_at], :include => {:features => {:only => [:name, :feature_id, :smart_proxy_id]}})}</pre>

Revision d076d573 - 11/21/2012 08:10 AM - Joseph Magen

This commit adds most of the functionality required for API v1

The overall goal was to extract the existing JSON response overall controllers, and to move them to a seperate name space.

- documentation was added to all requests (available under /apidoc) this include same request and response generated using `APIPIE_RECORD=examples rake test:api`
- Also Fixes #1800, fixes #1419, fixes #981 and fixes #1774

whats missing:

1. Permissions checks for all new controllers
2. Nested routes (e.g. /hosts/id/reports)
3. running tests with `oauth/basic_auth` (instead of `as_admin {get /}`)
