Foreman - Feature #17807

Will be handy to have the equivalent of rails runner in foreman-rake

Description

In a production environment I ve had to use "foreman-rake console" quite a few times to get information about objects while debugging customer instances. I know rails provides a "rails runner" script that can be used to run and fetch/execute data.

Would be nice to have a handy script to say something like "foreman-rake runner EVAL='Hostgroup.find(5).inspect'". We can then just ask the customer to run that line and get information.
