Bugzilla link:	1406175	**Red Hat JIRA:**	
Pull request:	https://github.com/theforeman/foreman/pull/4124		

Description

Cloned from https://bugzilla.redhat.com/show_bug.cgi?id=1406175
Description of problem:

When a user modifies a matcher in a smart param, this is logged as an audit event with auditable_type = LookupValue:

{
"user_id": 3,
"user_type": null,
"user_name": "admin",
"version": 4,
"comment": null,
"associated_id": 168,
"associated_type": "LookupKey",
"remote_address": "192.168.0.0",
"associated_name": "cs_puppet_config_csl31::naming_services_0001::nameservers",
"created_at": "2016-12-14 00:17:44 UTC",
"id": 15285,
"auditable_id": 53,
"auditable_name": "hostgroup=ORGANIZATION/CH/TESTING",
"auditable_type": "LookupValue",
"action": "update",
"audited_changes": {
"value": [
[
"192.168.0.0",
"192.168.0.0"
],
[
"192.168.0.0"
]
]
}
}

But I can't query these reports directly:

Doing this:

https://satellite.example.com/api/v2/audits?search=type=LookupValue

Returns this:

{
"error": {
"message": "'auditable_type' should be one of 'host, parameter, architecture, puppetclass, os, hostgroup, template', but the query

was 'LookupValue'",
"class": "ScopedSearch::QueryNotSupported"
}
}

Version-Release number of selected component (if applicable):

How reproducible:

Very

Steps to Reproduce:
1. use https://satellite.example.com/api/v2/audits?search=type=LookupValue
2.
3.

Actual results:

{
"error": {
"message": "'auditable_type' should be one of 'host, parameter, architecture, puppetclass, os, hostgroup, template', but the query was 'LookupValue'",
"class": "ScopedSearch::QueryNotSupported"
}
}

Expected results:

for it to return the correct data.
