Description

When you run the installer, admin password is stored in plain text in the answers file. It would be best if this wasn't stored in the answers file or cache. Perhaps if Kafo had some ability to blacklist parameters from being saved, string the password hashed, or encrypted (maybe hiera eyaml).

History

#1 - 12/21/2016 09:59 AM - Stephen Benjamin

- Project changed from Foreman to Installer

*- Subject changed from Don't store cleartext admin password in answers files
 to Don't store cleartext admin password in answers files*

#2 - 12/21/2016 10:20 AM - Marek Hulán

Kafo has support for this https://github.com/theforeman/kafo#password-arguments since day 1
