Description	
<p>After installing foreman and foreman-proxy (1.0.0.rc5) on an Ubuntu 12.04 (Server, 32bit) VM, I get a red box with a 500 error when I click puppetrun. My puppet version on this setup is 2.7.17</p> <p>Initially, I did not have everything setup and configured correctly when I was getting the 500. While writing this I did add the additional configuration items. I did, however still get the error after setting the additional items.</p> <p>From my /etc/puppet/auth.conf:</p> <pre>path /run method save allow *</pre> <p>I did not have a "namespaceauth.conf" so I created one:</p> <pre>[puppetrunner] allow *</pre> <p>I do have puppetrun installed:</p> <ol style="list-style-type: none">1. which puppetrun /usr/sbin/puppetrun <p>I've attached a screenshot of the error as well as a (slightly redacted) copy of my puppet.conf.</p>
