Installer - Bug #17925

puppet_proxy_ssh not configured correctly when using Puppet 4

Pull request:			

Description

When using Puppet 4 the path to the puppet client is /opt/puppetlabs/bin/puppet but foreman-installer does not take this into account. After installation /etc/foreman-proxy/settings.d/puppet_proxy_ssh.yml has the path as /usr/bin/puppet.

The documentation also does not mention these differences.

This should be resolved in Foreman 1.14.0 by
https://github.com/theforeman/puppet-foreman_proxy/commit/558f7f70fcf5c8279c3747263bae689bbbf6566d. Please do try out the current release candidate.
