Pull request:	
Description	
<p>It's already done as part of https://github.com/foreman/foreman/pull/3701, but I want to extract the Classification objects modification from there, and make it a standalone PR.</p> <p>Main files: ValuesHashQuery: query object that is responsible to return values hash for a given set of keys Classification concern: A concern that adds two scopes (values_hash, inherited_values) that are implemented as calls to the ValuesHashQuery object. ClassificationResult: Class that encapsulates rendering of values for a given key. Contains an option to show unrendered values too.</p>
