Description

Trying to install foreman with mysql support and it fails.
Happens on both Jessie and CentOS 7.

The installation command is:
foreman-installer -i --verbose \
--foreman-db-adapter=mysql2 \
--foreman-db-type=mysql \
--foreman-db-manage=false \
--foreman-db-host=10.10.24.2 \
--foreman-db-database=foreman\
--foreman-db-username=foreman \
--foreman-db-password=XXXXXXXXXXXXXX

The database exists and is empty.
The installation does populate it (73 tables are created and populated).

I guess this is fixed by https://github.com/theforeman/puppet-foreman/pull/488 which is part of the 1.14 installer.

Same problem with 1.14:

----8<-----
Something went wrong! Check the log for ERROR-level output   * Foreman is running at https://foreman.base.mydomain.com
Initial credentials are admin / aHcQE6ScpBEVjovP   * Foreman Proxy is running at https://foreman.base.mydomain.com:8443   * Puppetmaster is running at port 8140
The full log is at /var/log/foreman-installer/foreman.log
[INFO 2017-01-06 15:59:42 verbose] All hooks in group post finished
root@foreman:~# dpkg ~~l foreman~~
~~ii foreman   1.14.0~rc3-1   amd64   Systems management web interface~~
~~---->8----~~

Uploading the new logs too.

Please grep for ERROR messages in the logfile and fix the "Could not resolve 'httpredir.debian.org'" error, then re-run foreman-installer and report back, please.
