Foreman - Bug #18091

BMC management doesn't work with Dell's iDRAC7

Description

Hello

Dell's iDRAC7 defaults to lan20 (aka lanplus) and doesn't work with the legacy 1.0 version. rubyipmi 0.10 supports it and, chatting on IRC with dlobato, he says that smart-proxy does support it too.
So, there should be a graphical way to choose on a per-interface base which protocol Foreman should use to talk to the BMC.
