Category: Core	
Target version: 1.14.1	
Difficulty:	Fixed in Releases:
Triaged:	Found in Releases:
Bugzilla link:	Red Hat JIRA:
Pull request: https://github.com/foreman/smart-proxy/pull/495	
Description	
When trying to upgrade from 1.13 to 1.14 smart proxy on Windows 2008R2, I receive the following error when trying to run the proxy: <pre>C:\smart-proxy>bundle exec ruby C:\smart-proxy\bin\smart-proxy C:/smart-proxy/lib/proxy/log.rb:35:in `<class:LoggerFactory>': uninitialized constant Proxy::LoggerFactory::Syslog (NameError) from C:/smart-proxy/lib/proxy/log.rb:22:in `<module:Proxy>' from C:/smart-proxy/lib/proxy/log.rb:15:in `<top (required)>' from C:/smart-proxy/lib/launcher.rb:1:in `require' from C:/smart-proxy/lib/launcher.rb:1:in `<top (required)>' from C:/smart-proxy/lib/smart_proxy_main.rb:4:in `require' from C:/smart-proxy/lib/smart_proxy_main.rb:4:in `<top (required)>' from C:/smart-proxy/bin/smart-proxy:5:in `require' from C:/smart-proxy/bin/smart-proxy:5:in `<main>'</pre>	
I've tried Ruby 2.3.3. and ruby 2.2.6 and both have this issue. Smart proxy version 1.13 works fine on this machine.
